
The high-performance shaping tooth of felting needles

The high-performance shaping tooth of felting needles

Its can provide the customers with the unique three-dimensional rounding hook tooth.

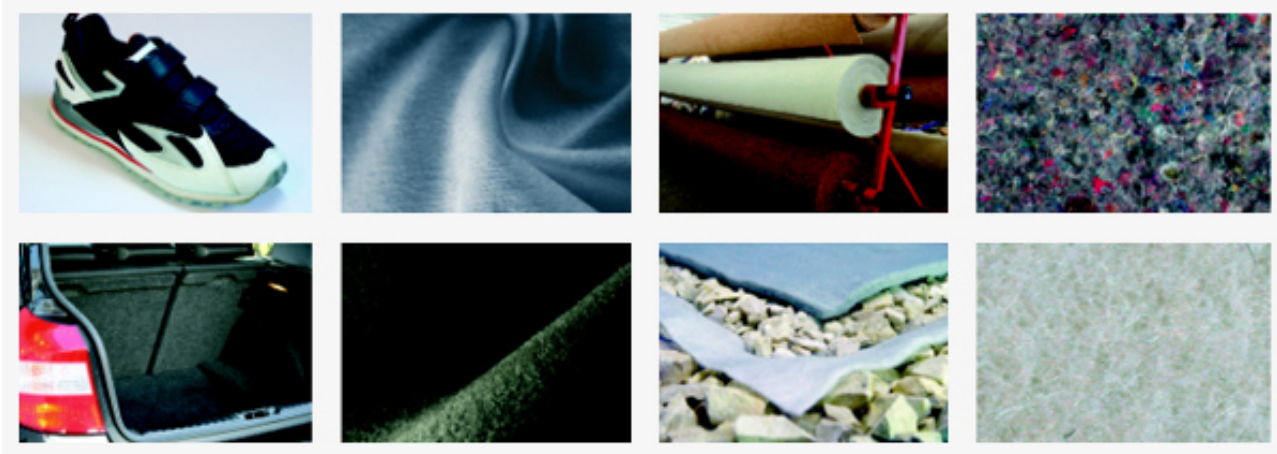

This kind of hook tooth has two outstanding features: one is the high-performance work efficiency and the other is soft fiber penetration without doing harm to the fiber.

Within all the relevant measurement data about the hook tooth and the features of the hook tooth itself, the hook tooth of the felting needles all has obviously high stability.

The high-performance tooth is applied to the production of non-woven fabric with high quality, such as artificial leather substrate, filter materials, automobile carpet, etc. Working parts are from No. 23 to No. 420.

Application Fields of the Felting Needles:

Shoe materials, filter materials, acoustic insulating materials, leather substrates, paper makers' felts, automotive interiors, clothing accessories, waste felts, household textiles, etc.
